

— MARKET ANALYSIS & COMMERCIAL PROPOSAL

Built from the **inside**. Priced by the market.

A comparative analysis of the SaaS market for commercial networks and the commercial proposal for the adoption of Formicanera by the Komet Italia sales network.

- Comparative analysis: generic SaaS, enterprise ERP, custom development
- Single commercial offer — market-justified pricing
- Dedicated IT consultant included in the package
- Documented ROI, contractual terms and GDPR guarantees

May 2026

OFFER VALID UNTIL

31 July 2026

Foreword

This document has been prepared at the request of Philipp Rovina (Gebr. Brasseler GmbH & Co. KG) and Marcello Sabatino (Komet Italia S.r.l.) to formally present the Formicanera platform in view of a potential adoption by the Komet Italia sales network.

Formicanera is a **vertical sales operations platform** for B2B commercial networks, developed and proven in production by a Komet agent with forty years of experience in the sector. It is not an academic project or a prototype: it is an active tool, used every day on real orders and real customers, with time-certified stability.

The following document presents the market analysis, the commercial proposal and the contractual terms. For technical documentation relating to security, GDPR and NIS2 compliance, please refer to the separate document "*Formicanera Security & Compliance Whitepaper*" addressed to the Gebr. Brasseler IT team.

Product status: In production since 2025 on real data. Archibald ERP integration certified and operational. Ready for rollout across the Komet Italia network within 6–8 weeks of signing.

1. The Market: What Exists and What It Costs

Before the proposal, it is useful to frame the context. A variety of solutions exist for commercial networks — each with well-defined costs, timelines and limitations. This analysis is based on public pricing lists and project estimates updated to Q1 2026.

Category	References	Mobile for agents	Archibald ERP integration	Time to go-live	Year 1 cost (60–80 users)
CRM / Generic SaaS	Salesforce Sales Cloud, HubSpot Enterprise, Pipedrive	Partial	X	3–6 months	€63,000–176,000
Extended ERP	MS Dynamics 365, SAP Business One, Oracle Field Service	Limited	X Requires development	12–24 months	€150,000–320,000
Custom development	Software house — analysis, development, deployment, testing	✓	18+ months	18–36 months	€220,000–420,000
Formicanera	Mobile-first PWA, ERP bot, document sync, notifications, dashboard, dedicated consultant	✓ Native	✓ Certified	6 weeks	€84,000 (prepaid)

** Indicative costs for 60–80 active users. ERP and custom development include implementation, licences and first-year maintenance. Data based on public pricing pages of Salesforce, HubSpot, Microsoft AppSource and benchmark figures from established software houses — Q1 2026.*

The Differentiator That Cannot Be Bought Elsewhere

None of the solutions above was designed to interact with the Archibald ERP. Building this integration requires any software house to perform a deep reverse engineering of the management system, with minimum timelines of 12–18 months and no guarantee of long-term stability.

Formicanera has already solved this problem — in production, on real orders and real customers, with time-certified stability. This is not an integration to be built: it is an integration that already works.

Methodological note: cost ranges are derived from verified public pricing pages (Salesforce.com/pricing, HubSpot.com/pricing, Microsoft AppSource), market quotations from software houses with teams of 10–30 developers, and B2B SaaS field sales benchmarks. Year 1 estimates include licences, implementation and maintenance.

2. The Proposal

The fee includes platform, infrastructure, support and a dedicated IT consultant — market-justified pricing as demonstrated by the comparative analysis in §1.

PRICING — KOMET ITALIA NETWORK PLAN · UP TO 80 ACTIVE USERS

ONE-TIME SETUP FEE

€30,000

MONTHLY FEE (LIST PRICE)

€5,000/month

→ €4,500/month with annual prepayment (–10%)

ADDITIONAL USER BEYOND 80

€35/month

€84,000

Year 1 with annual prepayment

€54,000

Annual prepaid fee from year 2 onwards

€64

Per user per month (at 70 users, prepaid)

€75/h

Evolutionary development outside contract scope

24-month contract · Automatic annual renewal · Payment within 30 days · –10% discount on annual prepayment (effective fee €4,500/month) · All prices VAT (exclusive) · Late payment interest applies

✓ Included in the monthly fee

- ✓ PWA access for all users (up to 80)
- ✓ Dedicated VPS hosting — Germany, EU (Hetzner)
- ✓ PostgreSQL database + automated daily backups
- ✓ Archibald ERP bot — operations and updates
- ✓ Orders, customers, delivery notes and invoices sync with ERP
- ✓ Real-time system, proactive notifications, dashboard
- ✓ Security and platform stability updates
- ✓ 24/7 uptime monitoring
- ✓ Technical support within SLA timeframes
- ✓ Onboarding: setup, training, data import
- ✓

→ Evolutionary development (extra, €75/hour)

- New roadmap features (backorders, AI, promotions)
- Microsoft Dynamics AX / D365 integration
- Custom back-office modules for Verona
- Internal Komet process automation
- Development for Komet European network expansion
- Additional training beyond onboarding
- Change requests outside agreed scope

3. What's Included: Dedicated IT Consultant

The monthly fee includes something that cannot be found in any SaaS catalogue: a real person who manages this system every day, who knows your sector from the inside, and who is available as the technical point of reference for Komet Italia.

Included in the fee: a real person, with over 20 years in this specific sector

The monthly fee does not include just the platform — it includes direct access to the person who built it and runs it every day. Not a consultant who studied your sector from a brief: with deep roots in the Komet network and the dental sector, I know the commercial cycle, the Archibald ERP and its inefficiencies from the inside. Formicanera was built from exactly that knowledge, and that knowledge remains available to Komet.

Operational IT support

Single point of reference for any internal Komet IT issue — from the PWA to the daily working tools of agents and back-office staff.

Komet systems integration

Integration roadmap with Microsoft Dynamics AX/D365, EDI flows, internal tools — with a counterpart who already knows the architecture.

Internal process automation

Identification and automation of repetitive back-office processes in Verona — reducing operational costs and improving data quality throughout the supply chain.

Long-term technology partner

Not a vendor who disappears after deployment — a structured long-term presence that grows with Komet and oversees every technological evolution of the network.

"This is not the largest solution on the market — it is the one built specifically for this network, by someone who has known it for twenty years. **This level of contextual knowledge cannot be purchased on any price list: you either have it or you don't.**"

4. The Economic Value: ROI in Numbers

Conservative calculation for 60–80 active agents — data measured in production on the Komet commercial cycle.

–**75%**

Time to place an order

From 15–20 minutes down to 3–5. The bot submits to Archibald asynchronously. For 60–80 agents × 3 orders/day × 250 days: **13,125 hours/year recovered** on order entry alone.

–**7,000 h**

Documents and coordination

Delivery notes/invoices already synchronised: retrievable in **1–2 minutes** from any device, without opening the ERP or calling Verona (60–80 ag × 2/day × 250 days × 7.5 min = **4,375 hours**). Calls to Verona for order status virtually eliminated (60–80 ag × 1.5/day × 250 days × 6 min = **2,625 hours**).

3,500 relationships

Territorial exclusivity protection

60–80 agents × ~50 active customers = ~3,500 relationships monitored every day automatically. The PWA notifies the agent when a customer is 4 months from Komet's critical threshold. Losing even a single territorial exclusivity can be worth **€20,000–50,000/year** in commissions.

–**€30,000**

ERP error costs eliminated

Manual entry: typical error rate of 2% on item code, quantity, customer. Over 52,500 orders/year: ~1,050 errors avoided × €30 handling cost (correction + communication + potential return) = **€31,500/year eliminated**. The bot copies the agent's order without any margin of error.

Instant history

Immediate response to the customer

Order history, prices and delivery notes always at hand. The agent answers on the spot to "what did we order last time?" or "what price was I paying for this item?" — without calling Verona, without waiting. Less hesitation = more trust = more orders closed.

Quote on visit

Close the sale during the appointment

Up-to-date prices and personalised discounts visible in real time. The agent can build and present a real quotation while still at the customer's premises. Those who decide on the spot buy — those who need to "follow up" often don't. (Priority roadmap item)

Estimated productivity recovered — Year 1
(conservative calculation)

~20,000 total hours × €35 average agent hourly cost · 60–80 active agents
13,125 orders + 7,000 documents/coordination = 20,125 hours
(understated calculation)

€700,000

From year 2, Formicanera costs less than **8%** of the value it generates (€54k on €700k)

For comparison: Salesforce Sales Cloud Enterprise for 70 users costs **approximately €120,000/year** (public list price Q1 2026, licences only) — with no Archibald integration, no bot, no sector knowledge. From year two, Formicanera costs **€54,000 prepaid — less than half**, with a functional scope built precisely for the Komet network.

4.2 Market Positioning — May 2026

Formicanera is positioned in the premium tier of field sales platforms with native ERP integration — at the price of mid-range competitors, with the exclusive advantage of being the only solution built specifically for the Archibald ERP and Italian regulatory requirements.

Vendor / Plan	€/user/month (year 2+)	Native ERP	Critical notes for Komet
Delta Sales App Advanced	~€23	X	No native ERP integration. Emerging market player, no Italian adaptation.
Badger Maps Business	~€53	X	Route optimisation, but no order management or ERP integration.
Skynamo Advanced	~€63	Partial	Opaque pricing (requires sales call). Separate, paid ERP implementation. No Italian adaptation.
Formicanera	€64	✓ Native	Only platform with Archibald ERP integration already operational. Full Italian regulatory compliance (VAT, credit notes, SDI). Zero opaque costs.
Pepperi Corporate	~€72	Plugin	Local partner required. Additional onboarding: €5,000–€46,000. No Archibald integration.
MS Dynamics 365 Enterprise	~€97	BC native	Licence is only the starting point. Power Platform additional. Customisation required for Italian workflows.
Salesforce Enterprise	~€152	X (MuleSoft)	ERP integration via MuleSoft: +€50,000/year. 3-year TCO: €465,000.

* Prices verified May 2026 from public sources (Pepperi, Delta Sales App, RepMove, Badger Maps, Microsoft, Salesforce). Skynamo from third-party sources (G2, FieldSalesTools). Source: public pricing pages, ECB exchange rate April 16, 2026: 1 EUR = 1.1782 USD.

Comparative 3-year TCO (60–80 users): Formicanera ~€187,000 · Skynamo ~€175,000–210,000 (+ implementation) · Pepperi ~€206,000–241,000 · Dynamics 365 ~€283,000 · Salesforce ~€465,000.
The price is not negotiable because it is already the market price — it is competitive, not preferential.

4.5 Feature Highlights

Three product areas introduced in the latest development phase — particularly relevant to the Komet commercial cycle.

Pending Orders — Save and Submit Whenever You Choose

- Save orders throughout the day without having to submit them immediately
- Unlimited accumulation of orders in "pending" status
- Deferred submission: send everything together at the time and place of your choice (e.g. on returning to the office, on Wi-Fi, at end of day)
- Non-blocking global progress bar: the agent can navigate the app while the bot submits orders in automatic sequence

Typical scenario: the agent visits 8 customers during the day, fills in each order on the spot, then at day's end presses "Submit all" — the bot places them all in Archibald in automatic sequence. Zero interruptions during visits, zero manual work in the evening.

Catalogue, Real-Time Stock Check and Quotations

- Full-text search across the complete Komet catalogue — instant results
- Real-time stock availability for every item (green/amber/red badge) — no phone calls to Verona
- Customer-specific price visible immediately — not the generic list price, but the contracted price
- Instant check: availability confirmed in under 2 seconds
- **Quote in one tap:** from any historical order, generate a professional PDF in under 3 seconds, shareable via WhatsApp, Gmail, Dropbox or direct link
- Automatic numbering, Formicanera header, VAT-inclusive totals — ready to show the customer during the visit

Typical scenario: the customer asks *"do you still have that bur?"* — the agent opens Formicanera, searches the item, sees stock and price in 2 seconds, and generates the quotation while still seated at the customer's table. Those who decide on the spot buy. Those who need to "follow up" often don't.

Integrations — Connected to Daily Work Tools

Formicanera connects natively to the tools agents use every day:

Integration	Available functionality
WhatsApp	Share orders, quotations and documents directly in chat — in one tap from the order screen
Gmail	Automatic sending of quotations and document notifications to customers, with professional header
Dropbox	Automatic archiving of delivery notes, invoices and quotations — organised by customer and date

Integration	Available functionality
Google Drive	Automatic sync and backup of all commercial documents to company Drive

5. Contractual Terms and Guarantees

Duration and renewal

24 months from the go-live date. Automatic annual renewal. Termination with **90 days** written notice.

Payment and invoicing

Setup fee in two instalments: 50% on signing, 50% at go-live. Monthly fee invoiced in arrears at **30 days**. -10% discount on advance annual prepayment.

Intellectual property

Platform owned by the provider. Komet receives an exclusive **licence to use** for its own network. Komet's data remains Komet's data under all circumstances.

Portability and exit

Data exportable in standard format (CSV/JSON) within 30 days of termination. No retention beyond **60 days** post-contract.

SLA — Uptime and support

Guaranteed uptime **99.5%** monthly. Critical incident: response within **4 business hours**. Standard support: **1 business day**. Proportional penalty for SLA breach.

GDPR and security

DPA (Art. 28 GDPR) signed before go-live. Hosting in Germany (EU) — **zero extra-EU transfers**. Breach notification to the Controller within 24 hours. EU Standard Contractual Clauses.

6. From Signing to Go-Live: 8 Weeks

Next Steps
